

Carriage Rollers

Carriage Rollers - Carriage rollers are especially designed bearings which are utilized on lift masts so as to help them work in challenging environmental conditions. Lift masts are normally subjected to shocks, oscillations, vibrations and high dynamic and static loads. This equipment is often exposed to environmental influences such as dust, cold, heat, moisture, contamination and aggressive ambient air. Thus, the lift masts' guidance arrangements need to be specifically tough and have a particular high load carrying capability.

Carriage rollers have been created as the answer for working in various environmental surroundings. These bearings are the answer where the guidance arrangements of the lift masts must be economical and maintain operational security while having the ability to deal with a specifically high load carrying capacity.
