

Barrel Clamp

Barrel Clamps - Called "Barrel Clamp", this hydraulic accessory is used on forklifts so as to compress objects which you would like to transfer with the forklift. Normally, they are utilized so as to handle kegs, paper rolls and barrels, with a few barrel clamp designs having the ability to revolve the cargo. For example, the revolving function enables the person operating the forklift to be able to slot in a vertically stored paper inside the horizontal intake of a printing press.
